

# PSA Modular Vertical Cartoner

## Features

### Carton Erector

- Rotary carton set-up for carton speeds of 50 cartons per minute or more
- Carton erector uses a rotary carton set-up system with cup rotation to achieve presentation to a pre-break station for hard-to-open cartons
- The same rotation can be used for bar code verification, reject or the addition of a code in the pre-break station
- An alternative reciprocating carton set-up module is available when carton speeds are less than 50 cartons per minute

### Carton Transport System

- Dedicated carton pockets with quick-change capabilities
- Eliminates the space-consuming multiple chains required for an adjustable chain system
- Provides accurate carton control, set-up and loading
- Provides the ability to run smaller cartons, while still allowing a much larger overall carton size range
- For the customer who still desires the multiple chain system for adjustability rather than dedicated buckets, we are offering our vertical with an optional adjustable chain

### Compact Design

- The low profile is an excellent ergonomic advantage where the load height can be set to match the best requirements of manual or auto-load systems

### Expandable Servo Drive System

- Using a servo drive system allows smaller size and higher torque capabilities. PSA's Modular Vertical Cartoner System is designed for flexible expansion capabilities necessary in today's changing packaging environment
